

Save the Date! Inaugural Research Symposium

April 20th & 21st, 2009
The Beckman Center
University of California, Irvine

From Molecular Biology to Human Therapies: Strategies, Challenges and Opportunities

Created through a collaboration between UC Irvine, the FDA and the USP, this inaugural symposium aims to showcase scientific advances in high-profile disease-related areas focusing on innovative strategies and solutions. Academics and industry alike will come together to share knowledge that will set the stage for forming mutually beneficial partnerships to ultimately benefit those afflicted. Representatives from the FDA will also be on hand to address regulatory issues at the same time.

Registration fee for this 2 day conference, including all meals and materials is \$500. A more formal invitation and agenda will be coming shortly.

Sample Session Topics:

- **Alzheimer's Disease**
- **Cancer**
- **Stem Cells**
- **Autoimmune Disorders**
- **Novel approaches to drug design, drug delivery, drug synthesis**
- **Vaccine development**
- **Biomarkers**
